

## ABOUT US

To confront all these challenges, the environmental and social movements (in the broadest sense) need to be coordinated, at least at the European level, not only for campaigns on specific issues (shale gas exploitation, water privatization, climate change, etc. ...) but also in order to better coordinate the struggles, analyze all policies that concern us, learn from the experiences of each other, etc.

The association «Alternatives to face ecological challenges» has been created to organize this meeting, on the initiative of the ecosocialist group of solidaritéS. We wish that this meeting would bring together in an extended way activists of collectives that are fighting for a society respectful of

human beings and nature and who feel the need to radically change system. The future will be ecosocialist (including social ecology, ecofeminism, libertarian ecology, etc.) or there will be none.

The aim should be to make of this meeting a first step in the creation of an anti-capitalist critical space that would be one of the references in left social and European politics. We wish to work out a document/manifesto that defines our profile and our intention to work and allow others to approach us. The conclusion of this work will be concrete proposals that we can spread in social, socialist or ecological organizations.

We propose to participate to the construction of this space allowing the advent of personal, political or even organizational bonds.

EUROPEAN MEETINGS  
**ALTERNATIVES  
TO ECOLOGICAL  
CHALLENGES**

GENEVA · 24 — 26 JANUARY 2014

## ALTERNATIVES TO ECOLOGICAL CHALLENGES

**EUROPEAN MEETINGS**  
GENEVA · 24 — 26 JANUARY 2014

### APPEAL

The current environmental crisis, demonstrated most disturbingly by the phenomenon of climate change, is an unprecedented threat to humanity and the natural environment. At the root of this catastrophe is a civilisation – Western capitalism – that is based on the unlimited accumulation of profit, consumerism, commodity fetishism and a logic of limitless expansion. This system has proved itself to be incompatible with protecting the environment.

We believe that the responses proposed from within the capitalist system (green capitalism, sustainable development, carbon markets, nuclear power, etc.) are unacceptable. They are not sufficient to respond to the social and ecological emergencies that we are facing.

Ecosocialism is a new attempt to articulate the fundamental ideals of socialism incorporating ecological critiques. Our aim is a new civilisation, an alternative way of life founded on new social and ethical values.

**Ecosocialism is not compatible with capitalism.  
Our ecosocialism is anti-capitalist and feminist.**

# PROGRAM
